BRONCHOGENIC CYST PRESENTING AS A LARGE UNILOCLAR LEFT ATRIUM MASS

SADEGHPOUR A. *, MALEKI M., NOUHI F., OJAGHI S.Z., ESMAILZADEH M., SAFAEI A., HOSSEINI SAEID

* Vali-Asr Tehran, Iran

We describe a rare case of LA mass in a 46-year-old man presenting to our service for the evaluation of exertional dyspnea. Echocardiography revealed a unilocular encapsulated large mass that was completely embedded in the LA wall. Surgery was done and histological findings confirmed the diagnosis of a bronchogenic cyst (Iranian Heart Journal 2002, 2003; 3(4) & 4(1): 74-76).
